Models 913, 913T, 9103 and 9103T can generate a temporal code pattern fire alarm signal (for evacuation) as required per NFPA 72, 1999 Edition.

Models 911, 911T, 9100 and 9100T are non-temporal and are intended for use in occupancies that do not require total evacuation but perhaps relocation or notification.

**NOTE:** The photoelectric type detectors are generally more effective at detecting slow, smoldering fires which smolder for hours before bursting into flame. Sources of these fires may include cigarettes burning in couches or bedding. The ionization type detectors are generally more effective at detecting fast, flaming fires which consume combustible materials rapidly and spread quickly. Sources of these fires may include paper burning in a waste container or a grease fire in the kitchen.
